---------------------------------	--------

## INFECTIOUS DISEASE TESTING

We test donors regularly and redo testing in intervals according to regulatory standards. All donors are tested negative for following:

HIV1 & HIV2  
HIV RNA  
Hepatitis B  
HBV DNA  
Hepatitis C  
HCV RNA  
Syphilis  
Gonorrhoea  
Chlamydia

Some donor batches have been tested for the following, where others have not. Contact us for further information regarding batch specific testing for:

HTLV 1&2  
CMV

## LIMITATIONS

# MEDICAL SUMMARY - CEREBA

Information provided about donor's own health and his family's health in this medical summary are self-reported by the donor.

Even though genetic screening reduces the risk of inheriting a genetic condition, it cannot be guaranteed that the donor is not a carrier of any of the diseases he is screened for or other diseases. If you are aware of any positive carrier status or inherited diseases that you may have, please consult your health care professional prior to using a donor.
